DevelopMentor – UT/NV

Hiring organization
Build Labs

Job Location
NV

Date posted
February 3, 2021

Description

Looking for a role that is more than just coding? This is it. Build Labs is hiring a Principal DevelopMentor for our expanding presence. This role is equivalent to a mid-senior level developer. In additional to tackling technical problems for clients, the Principal DevelopMentor will mentor 2-3 apprentices to help develop their technical capabilities. These apprentices will be former Bootcamp graduates, so someone who can empathize and understand their experience level upon graduation would be ideal.

Responsibilities

As a DevelopMentor, your primary role is to mentor the apprentice developers along their continued learning journey and prepare them for full time roles with our clients.

Identify the capabilities and skills gaps of each apprentice and develop and document their unique learning journey.

Manage the technical delivery of projects both internal and client-side.

Assist with growing a new market presence in Nevada and/or Utah.

Qualifications

Though Build Labs is tech agnostic, we expect a Principal Developmentor to be well versed in full stack development including:

· HTML/CSS with an attention to pixel-detail.
· .Net, Java, Ruby or Python experience masterly
· JavaScript with experience in React, React Native, AngularJS, or similar JS frameworks.
· Database experience in SQL, Mongo, etc.
· DevOps and Cloud experience would be beneficial as well. We usually run Heroku, but clients are frequently running Azure and AWS.

We won't bore you with a list of additional wish-list qualifications nor an arbitrary number of years of experience required. As a Principal DevelopMentor, you'll need to be strong enough to act as technical lead, possess the capabilities to build and launch web and mobile apps from scratch, have the ability to learn new technologies, and have empathy and passion for helping others grow their skills. Everything else is just details.

Drop us an application, a resume, and a brief summary of your experience and a link to your portfolio or your GitHub account, and we'll chat.
